

A definition list:

- separate** For FO tables, the mode in which all rules are physically separate and cannot overlap or conflict.
- collapse** For FO tables, the mode in which all coincident rules are collapsed to a single rule according to the precedence rules defined by CSS2.
- nested** A nested definition list.
- bested** The state of having been beaten. "He bested me at checkers."
- collapse-with-precedence** For FO tables, the mode in which all coincident rules are collapsed to a single rule according to the numeric precedence defined for each rule. The CSS2 precedence rules apply only if two conflicting rules have the same numeric precedence.

This is a unordered list with mixed descendants:
