

## 2-of-5 interleaved barcodes

This document contains several examples of 2-of-5 interleaved barcodes. A special stylesheet interprets data given in a string of digits, encodes it using 2-of-5 code into a sequence of bar states and then draws them in SVG.

Please refer to explanations inside of the 2of5i.xsl stylesheet for more information about the stylesheet usage.

 12345678	<b>Barcode value: 12345678</b> <b>Generate checksum: false</b> Barcode without checksum. Even number of digits.
 078901	<b>Barcode value: 78901</b> <b>Generate checksum: false</b> Barcode without checksum. Odd number of digits - leading non-significant null will be added to preserve sequence parity.
 341276303670	<b>Barcode value: 34127630367</b> <b>Generate checksum: true</b> Barcode with checksum. Odd number of data digits, even number of digits including checksum.
 03412763036719	<b>Barcode value: 341276303671</b> <b>Generate checksum: true</b> Barcode with checksum. Even number of data digits, odd number of digits including checksum - leading non-significant null will be added to preserve sequence parity.
