

## Header of page 1

Should be formatted as follows: light red background, thick red border at the bottom, a sequence of background images repeated horizontally. Background images and the text should be oriented normally (`reference-orientation="0"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).

### Left sidebar of page 1

Should be formatted as follows: light blue background, thick blue border at the bottom, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° clockwise (`reference-orientation="90"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

## Side Regions - Borders, Background, Reference Orientation

This document tests borders and backgrounds on side regions, with special emphasis on reference orientation.

### Right sidebar of page 1

Should be formatted as follows: light yellow background, thick brown border at the top, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° counterclockwise (`reference-orientation="270"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

### Footer of page 1

Should be formatted as follows: light green background, thick green border at the top, a sequence of background images repeated horizontally. Background images and the text should be turned upside down (`reference-orientation="180"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).

Should be formatted as follows: light yellow background, thick brown border at the bottom, a sequence of background images repeated horizontally. Background images and the text should be rotated by 90° clockwise (reference-orientation=" -90 " ), and aligned to the top (i.e. stuck to the central region). This region should extend to the corners (precedence=" true " ).

### Left sidebar of page 2

Should be formatted as follows: light green background, thick green border at the top, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be oriented normally (reference-orientation=" 0 " ), and aligned to the top (i.e. stuck to the central region). This region should not extend to the corners (precedence=" false " ).

### Footer of page 2

This document tests borders and backgrounds on side regions, with special emphasis on reference orientation.

### Header of page 2

Should be formatted as follows: light red background, thick red border at the bottom, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be turned upside down (reference-orientation=" -180 " ), and aligned to the top (i.e. stuck to the central region). This region should not extend to the corners (precedence=" false " ).

### Right sidebar of page 2

Should be formatted as follows: light blue background, thick blue border at the top, a sequence of background images repeated horizontally. Background images and the text should be rotated by 90° counterclockwise (reference-orientation=" -270 " ), and aligned to the top (i.e. stuck to the central region). This region should extend to the corners (precedence=" true " ).

### Header of page 3

Should be formatted as follows: light red background, thick red border at the bottom, a sequence of background images repeated horizontally. Background images and the text should be oriented normally (`reference-orientation="0"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).

#### Left sidebar of page 3

Should be formatted as follows: light blue background, thick blue border at the bottom, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° clockwise (`reference-orientation="90"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

This document tests borders and backgrounds on side regions, with special emphasis on reference orientation.

#### Right sidebar of page 3

Should be formatted as follows: light yellow background, thick brown border at the top, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° counterclockwise (`reference-orientation="270"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

#### Footer of page 3

Should be formatted as follows: light green background, thick green border at the top, a sequence of background images repeated horizontally. Background images and the text should be turned upside down (`reference-orientation="180"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).

Should be formatted as follows: light yellow background, thick brown border at the bottom, a sequence of background images repeated horizontally. Background images and the text should be rotated by 90° clockwise (reference-orientation=" -90 "), and aligned to the top (i.e. stuck to the central region). This region should extend to the corners (precedence=" true ").

#### Left sidebar of page 4

Should be formatted as follows: light green background, thick green border at the top, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be oriented normally (reference-orientation=" 0 "), and aligned to the top (i.e. stuck to the central region). This region should not extend to the corners (precedence=" false ").

#### Footer of page 4

This document tests borders and backgrounds on side regions, with special emphasis on reference orientation.

#### Header of page 4

Should be formatted as follows: light red background, thick red border at the bottom, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be turned upside down (reference-orientation=" -180 "), and aligned to the top (i.e. stuck to the central region). This region should not extend to the corners (precedence=" false ").

#### Right sidebar of page 4

Should be formatted as follows: light blue background, thick blue border at the top, a sequence of background images repeated horizontally. Background images and the text should be rotated by 90° counterclockwise (reference-orientation=" -270 "), and aligned to the top (i.e. stuck to the central region). This region should extend to the corners (precedence=" true ").

## Header of page 5

Should be formatted as follows: light red background, thick red border at the bottom, a sequence of background images repeated horizontally. Background images and the text should be oriented normally (`reference-orientation="0"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).

### Left sidebar of page 5

Should be formatted as follows: light blue background, thick blue border at the bottom, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° clockwise (`reference-orientation="90"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

This document tests borders and backgrounds on side regions, with special emphasis on reference orientation.

### Right sidebar of page 5

Should be formatted as follows: light yellow background, thick brown border at the top, a sequence of background images repeated vertically as a strip along the median of the region. Background images and the text should be rotated by 90° counterclockwise (`reference-orientation="270"`), and aligned to the bottom (i.e. stuck to the central region). This region should not extend to the corners (`precedence="false"`).

### Footer of page 5

Should be formatted as follows: light green background, thick green border at the top, a sequence of background images repeated horizontally. Background images and the text should be turned upside down (`reference-orientation="180"`), and aligned to the bottom (i.e. stuck to the central region). This region should extend to the corners (`precedence="true"`).
